SUMMARY

Fullstack Software Engineer with a Bachelor of Science in Computer Science and hands-on experience designing and developing innovative software solutions from initial concept to launch. Hands-on Developer and Motivated Self-starter focused on working with diverse cross-functional teams to bring new user-centric solutions to life while maximizing performance, reliability, and scalability.

SKILLS

- **Engineering:** Fullstack Development, Frontend & UI/UX, Backend & Infrastructure, Cloud Architecture, API Design, RESTful Web Services, Microservices, Testing & Code Coverage, CI/CD, DevOps, Software Quality, Scalability, Performance, Reliability, Automation, Cybersecurity, Accessibility, Code Reviews, Documentation, Client Relations, Agile
- **Leadership:** Strategic Planning & Execution, Project Management, Process Improvement, Cross-functional Collaboration
- **Technology:** Rust, Java, Python, C, HTML, CSS, Javascript, Typescript, React, Node.js, Express.js, JEST, JUnit, TailWindCSS, Bootstrap, Jest, React Testing library, Cypress, SQL, PostgreSQL, MongoDB, Git,

EDUCATION

- Bachelor of Science in Computer Science, University of New South Wales
 - International Student Award for Academic Excellence

SELECT PROJECTS

MyFridge - Food Management App, UNIHACK Hackathon 2024

- Reduced food waste and promoted healthier user choices by leading the development of a fullstack cross-platform iOS and Android app to simplify food management with a 6-person team using React Native, Expo, TypeScript, Node.js, and Axios.
- Generated recipe names, expiration dates, and health ratings based on user-submitted health conditions, including diabetes, hypertension, and obesity, by scanning receipts using Microsoft Azure Vision Read API and ChatGPT-3.5 Turbo.
- Earned the Best Design Award for UI functionality and usability from Atlassian and UNIHACK out of 470 engineers.

Nerd Station - Study Productivity App, Google Developer Student Club Hackathon 2023

- Designed, developed, and launched a transformative studying tool featuring integrated webcam features, a Pomodoro timer, a to-do list, notes, and a Gacha system to improve student engagement and streamline student learning.
- Implemented user authentication to strengthen security using NextAuth.js, introduced server-side rendering with Next.js to improve performance and SEO, and built a responsive and engaging UI with animations using TailwindCSS and Sass.
- Recognized for outstanding teamwork and technical prowess as the 3rd place-finishing team.

Successful Outcomes - Undergraduate Capstone Project

- Developed a MERN web application to enable the Computer Science and Engineering departments to chart course outlines and identify and resolve gaps and redundancies in course offerings using evidence-based information for accreditation.
- Mapped course learning outcomes to Bloom's Taxonomy to allow users to view how course outcomes map into each of Bloom's taxonomy and provide comprehensive course breakdowns and overviews of the cognitive tasks courses address.

RSheet - Multi-user Spreadsheet

- Developed a Rust spreadsheet server to efficiently manage concurrent interactions that leveraged Rust's threading, message-passing, and ownership mechanisms to dynamically calculate and update interdependent cells.

MyMyUNSW - Student Information System

- Wrote Python scripts to seamlessly query and visualize data in views using PostgreSQL and SQL to efficiently retrieve data.

ADDITIONAL EXPERIENCE

Information Technology Associate - ASEAN Society, University of New South Wales

2024

- Managed streaming platforms and booking applications to produce high-quality in-person and virtual events,
- Maintained the Society website and managed internal communication platforms, such as Discord, to enable collaboration.
- Partnered across teams and committees to develop IT infrastructure to support events and enhance digital content delivery.
